PROFESSIONAL SUMMARY

Results-driven Frontend Software Engineer with 2+ years of experience building scalable, high-performance web applications using React, TypeScript, Angular, and Redux. Specialized in performance optimization, accessibility, and delivering intuitive user interfaces that drive engagement and efficiency. Recently completed an MS in Computer Engineering with a focus on AI, machine learning, and real-time systems. Seeking opportunities in Frontend Engineering, Full-Stack Development, and AI-powered web applications.

EDUCATION

Master of Science in Computer Science, University of Central Missouri, USA Aug 2022 – May 2024
Coursework: Distributed Systems, Software Systems Engineering, Python Programming, Cloud Computing, Data Structures & Algorithms, Database Management Systems, Web Programming, Machine Learning

TECHNICAL SKILLS

Languages: C, C++, Go, Python, JavaScript, TypeScript, Swift, HTML, CSS, SQL
Frameworks & Libraries: FastAPI, React.js, Node.js, Flutter, GraphQL, jQuery
Tools & Technologies: Git, GitHub, VSCode, REST APIs, GraphQL APIs, Microservices, Micro Frontends, CI/CD, ServiceNow, Unix, Agile
Databases & OS: PostgreSQL, MySQL, MongoDB, NoSQL

EXPERIENCE

Software Engineer – Amazon Web Services April 2025 – Present

- Architected a distributed shuttle and cab booking system using C++, Python, and PostgreSQL across cloud environments, reducing employee commute times by 30% for 1,000+ users while achieving 99.9% uptime.
- Resolved 50+ high-priority production issues by debugging backend services and optimizing SQL queries, improving uptime from 97.8% to 99.5%.
- Enhanced 10+ web interfaces using JavaScript, HTML, CSS, and REST APIs, reducing input errors by 25% and improving user satisfaction.
- Automated 80% of regression tests using Python and C++ frameworks, reducing QA effort by 40% and accelerating release cycles.
- Optimized PostgreSQL performance by redesigning queries and implementing connection pooling, reducing execution time by 30%.
- Built CI/CD pipelines using Python automation scripts and build tools, increasing deployment frequency and reducing rollback time from 30 minutes to under 10 minutes.
- Implemented monitoring solutions for distributed systems using Python and C++, reducing defect reports by 20%.
- Worked in an 11-member Agile team delivering bi-weekly sprint goals with 90% completion rate across distributed systems.
- Improved UI/UX across multiple modules using JavaScript, increasing user satisfaction by 18%.
- Analyzed user feedback from 100+ users, reducing form submission errors by 25% and increasing engagement by 15%.
- Optimized frontend performance using asynchronous scripting and DOM improvements, reducing page load time by 28%.

Full-stack Developer Intern – CTS Feb 2021 – July 2021

- Crafted performant and responsive user experiences for data-heavy enterprise applications using Modern JavaScript and advanced CSS3 techniques including Flexbox, Grid, and animations.
- Implemented interactive data visualizations and analytics dashboards using Chart.js to support benchmark tracking and customizable reporting workflows.
- Optimized front-end application performance through lazy loading, bundle size reduction, and rendering efficiency improvements for metric-intensive dashboards.
- Utilized Git-based workflows and participated in code reviews to ensure adherence to modern development practices and consistent UI/UX standards.
